Worksite safety

I mark and secure the work area. I make sure the worksite and its surroundings are safe for me, my colleagues and external parties.

Machine and lifting work

I ensure that safe distances to machinery and loads are maintained. I communicate during work in mutually agreed ways.

Working at height

I use appropriate falling protection. I make sure no one below the work is in danger.

Personal protective equipment and working methods

The PPE's and tools used by me are correct and not damaged. I use the right working methods and suitable tools.

Electrical work

I always ensure that there is no voltage in the system and that the correct live line working method is used. I know the electrical safety risks influencing my work and I comply with requirements.

Traffic

I take variable weather conditions and circumstances into account in traffic. I do not cause danger to anyone with my traffic behavior.

I know how to do my job

The induction training and my professional skills always meet the requirements of my job.

I always think first

I do not assume, I ask and give advice. I plan my work so that risks are minimised. When changes take place in my work, I re-assess the risks.

By stopping unsafe work, I can save a life.

I have the right and duty to stop work if it cannot be done safely.

I care

I care for my own safety and that of others. I maintain my work ability and I look after my well-being.
