

Network tariffs and service fees

Large customers | 1 MAY 2023

ELENIA

The network service fee covers the following services:

- We transfer electrical energy from the production plant to the customer
- We meter electricity consumption and production
- We are responsible for the round-the-clock outage service of network operations
- We take care of network upgrades and maintenance

The electricity network services contract can be terminated in accordance with the terms of network service.

Good to know about electricity tax

In connection with the network service fee, electricity tax is charged and remitted to the state. Electricity tax includes the electricity excise duty and the strategic stockpile fee. All customers are automatically included in electricity tax category 1, unless they have reported otherwise. Companies operating in the manufacturing industry, mining industry, excavation or professional greenhouse cultivation sectors can be in electricity tax category 2, among others. A written declaration on the operations in tax category 2 must be sent to the network company.

Electricity tax (cent/kWh)	VAT 0%	VAT 24%
Tax category 1	2.253	2.79372
Tax category 2	0.063	0.07812

Demand distribution tariffs (VAT 0%)

The selected product can be exchanged for another product once a year. The delivery of 20 kV requires that the customer have an in-house transformer for the distribution of electricity.

In Demand Tariffs 1–3 the debiting demand of active power is defined as the average of the two highest monthly demands in the last 12 months, however, this demand must be at least 40kW. When defining the summer debiting demand in Demand Tariff 3, 80% of the monthly demand is taken into account. (monthly power = the highest measured 60 minute average demand of the month).

In Demand Tariffs 1–3 the debiting demand of reactive power is defined as the highest average inductive-reactive demand measured monthly in 60 minutes, from which 16% of the amount of the invoiceable active power will be deducted. Capacitive-reactive power is not billed for the time being, but overcompensation must be effectively prevented.

Demand tariff 1

Distribution fee (EUR/MWh)		Basic fee (EUR/month)	55.59
Distribution	30.92	Demand fee (EUR/kW, month)	2.87
Electricity tax, category 1	22.53	Reactive power fee (EUR/kVAr, month)	6.80
Electricity tax, category 2	0.63		
Distribution inclusive of electricity tax, category 1	53.45		
Distribution inclusive of electricity tax, category 2	31.55		

Demand tariff 2

	Winter weekday 1 Nov–31 Mar Mon–Sat 7 am–10 pm	All other times		
Distribution fee (EUR/MWh)			Basic fee (EUR/month)	71.49
Distribution	41.13	19.52	Demand fee (EUR/kW, month)	3.82
Electricity tax, category 1	22.53	22.53	Reactive power fee (EUR/kVAr, month)	6.80
Electricity tax, category 2	0.63	0.63		
Distribution inclusive of electricity tax, category 1	63.66	42.05		
Distribution inclusive of electricity tax, category 2	41.76	20.15		

Demand tariff 3 (20 kV delivery)

	Winter weekday 1 Nov–31 Mar Mon–Sat 7 am–10 pm	All other times		
Distribution fee (EUR/MWh)			Basic fee (EUR/month)	341.12
Distribution	31.08	15.28	Demand fee (EUR/kW, month)	2.63
Electricity tax, category 1	22.53	22.53	Reactive power fee (EUR/kVAr, month)	5.79
Electricity tax, category 2	0.63	0.63		
Distribution inclusive of electricity tax, category 1	53.61	37.81		
Distribution inclusive of electricity tax, category 2	31.71	15.91		

Demand tariff 4 (20 kV delivery)

	Winter weekday 1 Nov–31 Mar Mon–Sat 7 am–10 pm	All other times		
Distribution fee (EUR/MWh)			Basic fee (EUR/month)	23,000.00
Distribution	12.24	6.37	Demand efee (EUR/kW, month)	0.85
Electricity tax, category 1	22.53	22.53	Reactive power fee (EUR/kVAr, month)	5.79
Electricity tax, category 2	0.63	0.63		
Distribution inclusive of electricity tax, category 1	34.77	28.90		
Distribution inclusive of electricity tax, category 2	12.87	7.00		

In Demand tariff 4 the debiting demand of active power is defined as the remaining sum after deducting 6,000kW from the highest 60 minute average demand measured during the invoicing month.

In Demand Tariff 4 the debiting demand of reactive power is the highest average inductive-reactive demand measured monthly in 60 minutes, from which 16% of the highest average active power measured in the invoicing month will be deducted. Capacitive-reactive power is not billed for the time being, but overcompensation must be effectively prevented.

Electricity storage fee 1 (0.4 kV delivery)

fixed monthly fee EUR 50 + EUR 1.5/kW

The fixed monthly fee (€/kW) is determined by the nominal power of the equipment and includes the main grid fees. The electricity storage fees are intended for connections which only have the electricity storage connected to them.

Electricity storage fee 2 (20 kV delivery)

fixed monthly fee EUR 50 + EUR 1.0/kW

Electricity connection maintenance fees

Will be charged if the Customer wants to disconnect the electricity supply and keep the connection contract valid or if the Customer has not made a contract for electricity supply within 3 months after the completion of electricity connection.

Maintenance fee (EUR/month)	VAT 0%	VAT 24%
Maintenance fee 0.4 kV demand connections	118.67	147.15
Maintenance fee 20 kV demand connections	395.37	490.26

Distribution of production

This product is used in places where electricity is produced. Surplus electricity produced to the distribution network is subject to a distribution fee, with the exception of power plants with a nominal power of less than 50 kVA, which are not subject to a distribution fee. Surplus electricity must always have a buyer.

Production distribution fee (EUR/MWh)		Own consumption (EUR/MWh)**	Winter weekday 1 Dec- 28 Feb Mon-Fri 7 am-9 pm	All other times
Distribution, distribution network, production < 1 MVA*	0.7	Own consumption, distribution network, production < 1 MVA	0.00	0.00
Distribution, distribution network, production ≥ 1 MVA	0.7	Own consumption, distribution network, production ≥ 1 MVA	8.96	2.55

* If the nominal power of the power plant is less than 50 kVA, no distribution fee will be charged. ** Fees for own consumption are determined in accordance with the valid Fingrid price list. Last updated 1 January 2022. 'Own consumption' refers to the share of energy that is consumed behind the connection point and that is not fed into the electricity network. 'Own consumption' does not refer to a power plant's own electricity consumption.

Service fees

	VAT 0%	VAT 24%
Removal, transfer or inspection of the metering device (main fuse capacity ≤ 3 x 63 A) (EUR)	129.03	160
Removal, transfer or inspection of the metering device (main fuse capacity ≥ 3 x 80 A) (EUR)	201.61	250
Removal or transfer of an additional meter from a multi-metering panel (starting from the fourth meter) (EUR)	44.35	55
Service visit (EUR)	100.81	125
Payment reminder (VAT 0%) (EUR)	5	-
Disconnection or reconnection of electricity supply (EUR)	44.35	55
Disconnection of electricity supply during debt collection (VAT 0%) (EUR)	55	-
Investigation report at the customer's request (EUR/h)	32.26	40
Certificate of electricity usage (EUR)	8.06	10
Electricity consumption report for energy certificate (EUR/site)	20.16	25
Control visit due to a fault in the customer's devices (EUR)	100.81	125
Electrician's hourly rate (EUR/h)	52.42	65
Locating a cable, quick location (EUR)	177.42	220
Copy of Invoice	4.84	6

Free services

- Installation of a metering device
- Change of distribution tariff once per year
- Advice on tree felling close to electricity lines
- Advice on the location of underground cables
- Advice on electricity use
- Resolving quality of supply problems
- Meter reading when moving or changing electricity supplier
- Connection of electricity in conjunction with removal during office hours; at other times, according to the service fees. Reconnection must be ordered by 1pm on weekdays
